

Guaranteed Server Security
Fuss-Free Management

SINGAPORE

Pacnet IDC Firewall

MANAGED SERVICES

Server Co-location helps you maintain intellectual property in a safe, secure, quality controlled environment. Keeping these servers in good shape is not enough - you should guarantee the security of the data and applications hosted on those servers through the use of an efficient firewall.

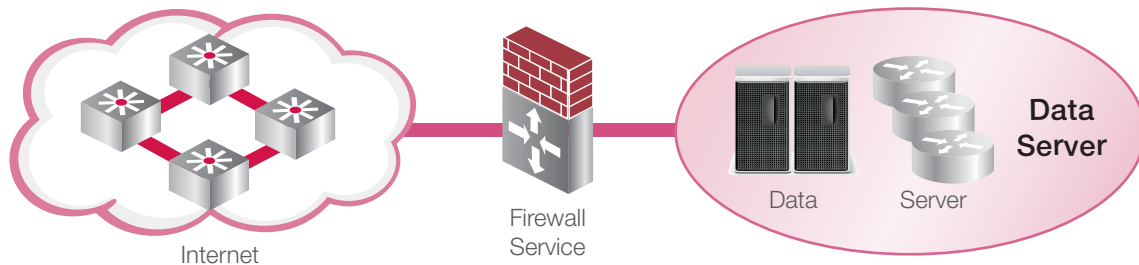

Security breaches on your server could be a major disaster, and at Pacnet's Data Centre we help enhance security of data hosted on the servers through Pacnet IDC Firewall - a customizable security solution that prevents unauthorised access into your co-located server at our facilities.

A turnkey solution that incorporates firewall set-up, configuration, round-the-clock monitoring and administration Pacnet IDC Firewall delivers the reliability and optimum security you need to protect your hosted equipment.

Guaranteed Server Security Fuss-Free Management
